New Distributor for Fluid Dynamics

Another Cambridge college chooses Scaletron to protect its hot water system. St. John's is one of Cambridge University's oldest colleges. During a recent refurbishment Scaletrons were the preferred method of scale prevention for the students accommodation

F.T. Eau of Lyons France is Fluid Dynamics latest distributor. Owner Frederic Monteil used to sell chemical water treatment but found that more and more of his clients were requesting non-chemical answers. Frederic spent many hours researching before he decided that Fluid Dynamics was the right company for him to work with

[Russians Visit Fluid Dynamics in UK](#)

Two senior engineers from OEMK steelworks 800km from Moscow made the journey to London for a presentation from Fluid Dynamics technical team on catalytic water treatment . They also visited one of Fluid Dynamics largest clients in UK S&A Fruit Farms where there are 6 x 4" Colloid-A-Tron units protecting plate type heat exchangers from scaling in one of the hardest water areas in England.

Honda Thailand installs Colloid-A-Tron units to protect Compressors.

Scaling is a significant problem in Thailand building up in pipework and in cooling circuits. Honda Thailand recently installed a 21/2" Colloid-A-Tron to protect cooling circuits in the Compressor Room from scaling

First Shipment to China

Fluid Dynamics received its first order from China in October..

Fluid Dynamics Managing Director Robert Spencer visited China in December to supervise the installation of 1 x 6" and 2 x 2" Colloid-A-Tron units protecting compressor cooling circuits in a large power plant.

One of The units.. (pictured left) protects a brand new aftercooler. Historically aftercoolers are cleaned every two months with drills

Success on the Road in the USA.. Housetron success

In the USA many people move around the country either on holiday or as a way of life in Recreational Vehicles (R.V's). Scaling can be a big problem as they move from place to place: here is the report from one customer who put a Housetron on the water feed line to his RV's water tank.

" I don't know how or why this thing works, but I am impressed with the very noticeable results. The next big test will be in November when I will be in Arizona where I will probably remain for the winter. As you may know the water there is particularly hard, too. Some observed specifics, I have a shiny stainless sink that had many water marks which are now gone. The glass shower door remains clear since the Housetron installation. The cloudy stainless steel in the dishwasher is now clean and bright.

To date, a great product!.."
